

” I see when ideas are ready.
And people who do everything possible
to make these ideas a reality. I sense the cer-
tainty that our imagination is an unlimited source
of energy. It is now and will remain
so in the future. “

At Olympus, it's the people who advance the development of innovative solutions. By their dedication in the fields of Cameras, Endoscopy and Microscopy we have become the globally leading manufacturer of opto-digital technology. All over Europe our employees turn our ideas into reality every day. Moreover, we provide an excellent framework and a pleasant working atmosphere.

The R&D group of our Electron Microscopy Product Unit develops software and hardware products. Development activities relating to software products used in the field of electron microscopy contain everything from entry-level packages to highly complex applications such as energy-filtering electron microscopy or tomography.

Join our international team in **Münster** to further strengthen our solid market position.

Product Developer Software

Product Unit Electron Microscopy

Key Activities:

- Requirements engineering of new software products by taking into account market demands and applying current applications knowledge
- Specify functional behaviour and map out GUI of software to be developed
- Develop test plans and conduct blackbox and integration tests
- Manage projects while ensuring full compliance with defined processes and guidelines for software development
- Perform continuous bug and change management
- Assist sales organisation (product information, presentations and training as well as 3rd Level Support for technical and applications-related issues)
- Monitor software development projects for products relating to electron microscopy in the market

Your Profile:

- Solid degree in a technical discipline or in the area of natural sciences
- Proven track record in product or software development

- Applications expertise and good technical understanding in the field of electron microscopy
- Knowledge of digital camera systems and image processing
- Demonstrable skills in project management
- Excellent command of English, both written and spoken
- Ability to work in a self-directed, structured and conceptual manner
- Communicative, flexible and team-based approach
